Capabilities

SailRail Automated Systems Inc. is one of the worlds leading suppliers of automated material handling systems. Focusing entirely on the automotive industry, we specialize in linefeeding, conveying, exchanging and displaying racks and containers for assembly and stamping operations. Equipment interfaces range from manual operator control with forklift loading/unloading

to fully automated solutions with robotic and AGV delivery functions.

Scope of service

The scope of service includes integrating the automated material handling and linefeeding for entire body shops to individual work cell applications. Specialty projects are done in conjunction with our strategic technology partner base.

Customer base

SailRail has extensive experience in providing turnkey systems for Ford Motor Company, General Motors Corporation, DaimlerChrysler Corporation, Mercedes-Benz, Toyota Motor Manufacturing and a host of parts manufacturers.

Equipment platforms and technology

Our product platforms include: Over/Under, Side/Side, Linear, L-shape and Tower ASRS; all enabling synchronous material flow. We have recently created an extensive line of products facilitating the Fork Free Handling initiatives.

New standards in material handling technology

With SailRail you can benefit from our proven and patented air bearing technology, which is unsurpassed in the industry for its safe, low maintenance, low life cycle cost operation. Offering new developments and advances in rack handling technology, SailRail incorporates advanced ergonomic elements into its design.

Quality commitment

SailRail is registered to the ISO 9001 and QS/TE 9000 standard and is a proud Q1 supplier. Our quality focus is on innovative solutions with the highest degree of reliability. Our success is measured by outstanding customer satisfaction.
